

Leading Orthopaedic Surgeon in the UK: Mr Reza Mayahi – Expert in Hip & Knee Care

Exceptional Orthopaedic Care in East Yorkshire

When it comes to restoring mobility, relieving pain, and improving quality of life, having a highly skilled consultant orthopaedic surgeon is essential. [Mr Reza Mayahi](#) stands out as a premier **consultant orthopaedic surgeon** based in **Anlaby, East Yorkshire**, serving patients across **Hull, Beverley, and North Lincolnshire**. With a comprehensive range of treatments focused on both hip and knee conditions, Mr Mayahi combines years of surgical expertise with a commitment to personalised, patient-centred care that consistently delivers excellent outcomes.

Who Is Mr Reza Mayahi?

Mr Reza Mayahi is a highly regarded **Consultant Orthopaedic Surgeon** specialising in hip and knee surgery. With over two decades of experience in orthopaedic practice, he has trained extensively in prestigious centres across the UK and abroad including **London, Cambridge, Sydney, Oxford and Coventry**. His broad expertise covers joint replacement, arthroscopic (keyhole) procedures, ligament reconstruction, cartilage preservation, and complex joint surgery aimed at restoring mobility and reducing pain.

Mr Mayahi's clinical practice centres on providing evidence-based, personalised treatments tailored to each patient's individual goals and lifestyle. His professional approach emphasises **clear communication, shared decision-making, and bespoke care plans** that help patients feel supported and informed throughout every step of their treatment journey.

Comprehensive Range of Hip and Knee Treatments

Hip Replacement Surgery – Restoring Mobility and Comfort

Hip replacement is one of the most effective surgical treatments for severe hip pain, often caused by osteoarthritis or degenerative joint changes. Mr Mayahi offers **total hip replacement procedures** designed to relieve pain, improve function, and restore mobility. This surgery involves removing the damaged joint surfaces and replacing them with durable prosthetic components to mimic the natural movement of the hip.

Patients undergoing hip replacement typically experience significant improvement in comfort and mobility. Most individuals can expect to return to normal daily activities within **6–12**

weeks of surgery, and modern hip implants are designed to last **15–20 years or more** with proper care and rehabilitation.

Knee Replacement and Joint Preservation

For patients with debilitating knee pain or severe arthritis, Mr Mayahi provides **total and partial knee replacement surgery**. Partial knee replacement can be ideal when only one compartment of the knee is affected, offering less invasive treatment and often a quicker recovery. Total knee replacement addresses the whole joint and is a highly successful option when arthritis affects multiple areas.

In addition to joint replacement, Mr Mayahi offers **joint-preserving procedures** such as High Tibial Osteotomy (HTO), which realigns the knee to offload pressure from damaged areas. These treatments can delay the need for a full joint replacement and are particularly suitable for younger, active patients.

Arthroscopy and Minimally Invasive Techniques

Mr Mayahi utilises **arthroscopy**, a minimally invasive ‘keyhole’ surgical technique, to diagnose and treat a range of knee problems including **meniscal tears, cartilage injuries, ligament tears**, and mechanical symptoms within the joint. Arthroscopic surgery typically results in smaller incisions, reduced postoperative pain, and faster recovery compared to traditional open procedures.

This advanced surgical technique highlights Mr Mayahi’s commitment to preserving as much of the patient’s natural joint as possible, helping to maintain mobility and reduce the long-term impact of joint degeneration.

Innovative Non-Surgical Treatments: Arthrosamid®

For patients seeking alternatives to surgery, Mr Mayahi provides **Arthrosamid®**, an innovative injectable treatment for knee osteoarthritis. This treatment can offer **pain relief and improved mobility without surgical intervention**, making it a valuable option for individuals who may not yet be ready for surgery or who prefer non-invasive care pathways.

Expertise and Personalised Care

Holistic, Patient-Centred Approach

What sets Mr Mayahi apart is not just his surgical skill, but his approach to patient care. Every consultation begins with a detailed assessment to understand the patient’s symptoms, lifestyle, and expectations. With clear explanations of each treatment option, patients are empowered to make informed decisions about their care.

This commitment to a shared decision-making process ensures that treatment plans are tailored to individual needs — whether that involves surgical intervention, non-surgical therapies, or a combination of both.

Full Continuum of Care

From initial assessment and diagnostic imaging through to surgery and structured rehabilitation, Mr Mayahi provides a **seamless continuum of care**. He works closely with physiotherapists, rehabilitation specialists, and support teams to create comprehensive recovery plans that help patients return to daily activities with confidence.

Conditions Treated

Mr Mayahi treats a wide range of hip and knee conditions including:

- **Hip arthritis and degenerative joint disease** – often addressed with hip replacement surgery.
- **Knee osteoarthritis** – treated through joint replacement, Arthrosamid®, or joint-preserving procedures.
- **Meniscal tears and cartilage injuries** – diagnosed and treated with arthroscopy.
- **Ligament injuries and instability** – treated with ligament reconstruction and specialised surgery.
- **Complex knee problems** – including patella instability and deformity correction.

Success Stories and Patient Feedback

Patients who have received care from Mr Mayahi frequently report transformative outcomes, noting not only improved mobility, but also a caring and supportive clinical experience. Story after story reflects enhanced quality of life following hip or knee treatments, with many patients returning to activities they previously found difficult or painful.

Frequently Asked Questions

How long does a hip or knee replacement last?

With current advances in implant technology and surgical techniques, most hip and knee replacements can last for **15–20 years or more** with proper care.

When can I return to normal activities after surgery?

Most patients resume low-impact daily activities within **6–12 weeks** following joint replacement, with ongoing improvements in strength and mobility as rehabilitation progresses.

Are there non-surgical options for joint pain?

Yes, treatments like **Arthrosamid® injections** can offer pain relief and improved mobility without the need for surgery in suitable cases.

Conclusion

Mr Reza Mayahi represents excellence in orthopaedic care across East Yorkshire and North Lincolnshire, blending extensive surgical experience with a compassionate, patient-centred approach. Whether you are seeking relief from chronic hip pain, exploring joint preservation strategies, or considering advanced knee care, Mr Mayahi provides expert guidance and tailored treatment solutions designed to restore mobility and enhance quality of life.
